

Does the photovoltaic inverter have a generator

Overview

A solar inverter with generator input is a hybrid inverter that supports two primary power sources: solar panels and a backup generator. While the inverter's main responsibility is converting solar-generated DC electricity into AC electricity for immediate use, it also accepts input.

Solar inverters may be classified into four broad types: 1. Stand-alone inverters, used in stand-alone power systems where the inverter draws its DC energy from batteries charged by photovoltaic arrays. Many stand-alone inverters also incorporate integral battery chargers to replenish the battery from an AC source when available. Normally, these do not interface in any way with the utility gri
