This previous question explains what a flywheel does and why it is needed. That explanation means that the flywheel needs a certain amount of mass to do its job. However, an

A flywheel serves four main purposes (in most vehicles): It provides mass for rotational inertia to keep the engine in motion. It is specifically weighted to provide balance for the crankshaft. It

Flywheel storage power system

A flywheel-storage power system uses a flywheel for grid energy storage, (see Flywheel energy storage) and can be a comparatively small storage facility with a peak power of up to 20 MW. It typically is used to stabilize to some degree power grids, to help them stay on the grid frequency, and to serve as a short-term compensation storage. Unlike common storage power plants, such as the pumped storage power plants with capaci
