 **LFP 12V 100Ah**

## Overview

---

Flywheel energy storage (FES) works by spinning a rotor (flywheel) and maintaining the energy in the system as rotational energy. When energy is extracted from the system, the flywheel's rotational speed is reduced as a consequence of the principle of conservation of energy; adding energy to the system correspondingly results in an increase in the speed of the flywheel.

Whi. Main componentsA typical system consists of a flywheel supported by connected to a. The flywheel and sometimes motor-generator may be enclosed in a to reduce fricti.
