

How many volts of solar power does California produce

Overview

When asking "how many volts of solar power does California produce," there's a common mix-up between voltage (measured in volts) and power generation capacity (measured in watts). While your toaster might use 120 volts, utility-scale solar operates on an entirely different scale.

OverviewHistoryPhotovoltaicsSolar thermal powerGenerationGovernment supportState challenges with solar powerPublic opinion

Solar power has been growing rapidly in the U.S. state of California because of high insolation, community support, declining solar costs, and a renewable portfolio standard which requires that 60% of California's electricity come from renewable resources by 2030, with 100% by 2045. Much of this is expected to come from solar power via photovoltaic facilities or concentrated solar power facilities.

United States

Per capita residential and commercial sector energy use in California is lower than in all other states except Hawaii. California stretches two-thirds of the way up the U.S. West Coast.
