

How to change the power supply if the base station delay is too high

Overview

To solve this problem, reduce the track current load by setting up additional power districts to provide more total power for the layout.

How to change the power supply if the base station delay is too high

[what kind of power supplies do you guys use for base station](#)

That radio should run from 11.73v to 15.87v but at 12v and 5 amps, you'll probably put too much demand on that little power supply. I use a switching power supply similar to this one.

[Troubleshooting - DCC-EX Model Railroading documentation](#)

You should see the power indicator LED illuminate and power should flow down to the Arduino and illuminate its power LED indicator. If you don't see the power light on the Arduino, check that the
