

How to match the electricity meter with photovoltaic panels

Overview

In this video I go through four scenarios of how to read a smart meter on a home in California that is outfitted with photovoltaic solar panels and a smart meter. The meter is operated by Southern California Edison and its brand is "OpenWay".

How to match the electricity meter with photovoltaic panels

How to Read an Electric Meter With Solar Panels

Stop guessing your solar bill. Learn the exact steps to read your electric meter's import and export data.

[Why Your Bill Doesn't Match Your Solar App? Power NW](#)

Confused by your solar bill vs. your app? We explain solar net metering, energy credits, the March true-up, and why you still draw power from

Solar Power and Net Metering

Measuring the flow of electricity in two directions requires a "net meter." Your meter has two registers, both going forward but one at a time. One register is

[RegEx match open tags except XHTML self-contained tags](#)

The tag to match may end with a simple ">" symbol, or a possible XHTML closure, which makes use of the slash before it: (/>,>). The slash is, of course, escaped since it coincides with the regular

[Regular expression to match string starting with a specific word](#)

How do I create a regular expression to match a

Python: match/case by type of value

You can match directly against the type of `v`, but you need a value pattern to refer to the types to match, as a "dotless" name is a capture pattern that matches any value.

word at the beginning of a string? We are looking to match stop at the beginning of a string and anything can follow it. For example, the

[SQL Error: ORA-01861: literal does not match format string 01861](#)

8 ORA-01861: literal does not match format string This happens because you have tried to enter a literal with a format string, but the length of the format string was not the same length as the literal. You can

[How to match "any character" in regular expression?](#)

You may also sometimes need to match newlines in Java regexes in contexts where you cannot pass `Pattern.DOTALL`, such as when doing a multi-line regex search in Eclipse, or as a user

[Regular expression to match a line that doesn't contain a word](#)

I know it's possible to match a word and then reverse the matches using other tools (e.g. `grep -v`). However, is it possible to match lines that do not contain a specific word, e.g. `hede`, using a

regexp

This MATLAB function returns the starting index of each substring of str that matches the character patterns specified by the regular expression.
