

Is the glue used between photovoltaic panels toxic

Overview

Solar panel glass layers use specialized encapsulants - not conventional glue - to bond components. Modern photovoltaic (PV) modules employ non-toxic ethylene-vinyl acetate (EVA) or polyolefin (POE) films that become chemically inert after lamination.

It's important to note that not all PFAS compounds are dangerous. Some PFAS compounds, such as Teflon, are much more stable and present no risk to human health under normal conditions of use.⁸

PV Toxicity Factsheet

Some thin-film solar panels use cadmium-telluride (CdTe) to form a solid semiconductor compound. CdTe is nonflammable with a melting point over 1,000° Celsius, and it is practically insoluble in water.

One often overlooked yet vital component that significantly contributes to these attributes is the adhesive and sealant used in solar panel

Adhesive

Adhesive, also known as glue, cement, mucilage, or paste, is any non-metallic substance applied to one or both surfaces of two separate items that binds them together and resists their separation.

[Are Solar Panels Filled with Toxic Chemicals that Leach Into Our](#)

Despite the fact that some states have gone so far as to ban use of these materials, there's no evidence that today's photovoltaic cells contain arsenic, germanium, hexavalent chromium
