

Minimum inverter power for photovoltaic power generation

Overview

Your inverter needs to handle that 6kW of DC power, regardless of whether your home uses 2kW or 10kW at any given moment. The grid and your electrical panel manage the distribution to your appliances. Consider this real-world example:.

The minimum in the cost function is rather "flat", however, as the vertical scale suggests. If we consider other relative cost factors $\alpha \geq 1$, we see from our result above that α

What size inverter do I need?

Therefore, the inverter must have a continuous power rating of at least 650W. Operating an inverter at a load exceeding its continuous rating will trigger its overload protection, causing it to
