

Nigeria electricity distribution

Overview

In Nigeria, electrical power generated by the is used to power the grid through the (TCN). Electricity is distributed through the transmission of electric power from TCN to the distribution companies (DisCos) primary substations, then to the secondary distribution system, and finally to the end. (AC) is used for the transmission of electric power; this is because AC can be easily changed from one to another with a slight loss of energy with t.
