

The actual power generation of wind power is low

Overview

Despite the installation of more and more wind turbines, wind production declined in July to a 33-month low. Wind production also declined in 2023 from the year before despite 7 gigawatts of wind capacity being added to the grid that year.

There are 13 meanings listed in OED's entry for the word actual, two of which are labelled obsolete. See 'Meaning & use' for definitions, usage, and quotation evidence.

How Much Energy Does A Wind Turbine Produce?

EMISSION IMPACTS OF WIND POWER

Wind power is a renewable electricity generation source that does not emit CO₂ in operation. It has very low life cycle CO₂ emissions when compared with fossil fuelled generation.

A wind turbine's actual output far exceeds simple rated power conversion. Instead, it results from the combined effects of wind resources,

Wind Energy Factsheet

Noise levels at a 350m distance from a typical wind farm is 35-45 dB-comparable to a quiet bedroom (35 dB) and quieter than a car traveling 40 mph at 100m

Wind Output Falls to a 33-Month Low in July

Despite the installation of more and more wind turbines, wind production declined in July to a 33-month low. Wind production also declined in 2023 from the year before despite 7 gigawatts of

actual

actual (countable and uncountable, plural actuals) an actual, real one; notably: (finance) something actually received; real receipts, as distinct from estimated ones.

Actual Definition & Meaning

Actual definition: Conforming to the

characteristics of a group or type; typical.

Wind Energy Myths: What the Science Actually Says

Power available in wind is proportional to the cube of wind speed. A small increase in wind speed (from building taller towers) produces a massive increase in available power.

Wind Turbines: Not Green, Not Reliable

Because the wind does not always blow, these turbines are running at maximum power only about 35% of the time. That is low compared with
