

The fuel for renewable energy systems

Overview

These fuels include solid biomass (excluding for traditional uses), liquid biofuels, biogases (biogas and biomethane), electrolytic hydrogen made from renewable electricity (renewable hydrogen) and e-fuels (fuels made from renewable hydrogen, including e-kerosene).

Renewable energy

Summary Overview Mainstream technologies Emerging technologies Comparison of the theoretical and practical potentials of different renewable energy technologies Market and industry trends Policy Finance

Renewable energy (also called green energy) is

energy made from renewable natural resources that are replenished on a human timescale. The most widely used renewable energy types are solar energy, wind power, and hydropower. Bioenergy and geothermal power are also significant in some countries. Renewable energy installations can be large or small and are suited for both urban and rural areas. Renewable energy is oft

[California gas nears \\$6, diesel hits record \\$7.45 amid supply fears](#)

California gas prices approach \$6 while diesel hits a record \$7.45 as supply concerns and global oil tensions drive the sharpest monthly spike on record, squeezing drivers statewide.

[Renewable energy , Types, Advantages, & Facts , Britannica](#)

Renewable energy, usable energy derived from replenishable sources such as the Sun (solar energy), wind (wind power), rivers (hydroelectric power), hot springs (geothermal energy),
