[Many open files leading to uninterruptible sleep "D state"](#)

An uninterruptible D state is entered when a disk

driver is seeking for some data in the disk and the disk has to be waited for for the process to continue. Normally a process sticking on a D

[How can I put process into "uninterruptible sleep"?](#)

I'm noticed that process that dumping a core is in uninterruptible sleep, so it can't be killed with SIGKILL, but when I'm trying to emulate this behavior using pipe commands that receives coredump I can

how to find out what it is waiting for

When looking at the process with "ps ax" the stat column is "DI" which means "uninterruptible sleep (usually IO)". Is it possible to find out more details on what the process is

[What are use cases of making Java method UnInterruptible](#)

What are other use cases that we might want to use the same pattern of uninterruptible code?
Edit: I just realised I linked it to incorrect method.
public static boolean

Do we need to call set_current_state (TASK

Yes, you must call `set_current_state()` before calling `schedule()`, because otherwise the scheduler will not remove the task from the run queue (if you just want to potentially allow other tasks

How to stop 'uninterruptible' process on Linux?

I have a VirtualBox process hanging around which I tried to kill (KILL/ABORT) but without success. The parent pid is 1 (init). top shows the process as D which is documented as "uninterruptible sl

[Why there is a state called 'TASK_UNINTERRUPTIBLE' in Linux](#)

Another question is, if we enable PREEMPT then the linux kernel become a preemptive kernel so at any place when we are handling a syscall in the kernel mode, it may be preempted so

UPS Prices on Kenya. Uninterruptible Power Supply
