

Wandering flywheel energy storage

Overview

Instead of storing electricity in chemical bonds, flywheels store it as rotational kinetic energy in a rapidly spinning rotor. That makes them fundamentally different from batteries-and especially attractive where speed, repeatability, and long service life matter most.

A typical system consists of a flywheel supported by rolling-element bearing connected to a motor-generator. The flywheel and sometimes motor-generator may be enclosed in a vacuum chamber to reduce friction and energy loss. First-generation flywheel energy-storage systems use a large steel flywheel rotating on mechanical bearings. Newer systems use carbon-fiber composite rotors that have a hi

Grid-Scale Flywheel Kinetic Energy Storage Systems
