

What is the crossbeam on the photovoltaic bracket

Overview

Crossbeam brackets generally serve a compressive role, typically made of aluminum alloy C-shaped steel, with hole diameters selected based on the installation environment. Vertical brackets can either be the back beam of the triangular beam frame or be designed separately.

Based on the problems referred to above, the utility model provides a kind of solar bracket crossbeam joint, to realize quick and dismantlable assembling of solar bracket.

The support structures are the elements that allow the fixing of the modules on the roofs where the photovoltaic installation must be housed, constituting a main element of the solution.
