### Change size of axes title and labels in ggplot2

16 To change the size of (almost) all text elements, in one place, and synchronously, `rel()` is quite efficient: `g+theme(text = element_text(size=rel(3.5)))` You might want to tweak the number a bit, to get

The same array at 24V would need a 50A controller, and at 12V, you'd need an expensive 100A unit. For 2000W systems, 48V becomes essential, requiring only a 50A controller versus

If the size of the int is that important one can use `int16_t`, `int32_t` and `int64_t` (need the `iostream` include for that if I remember correctly). What's nice about this that `int64_t` should not have issues on a 32bit

A 10A controller can be used with 24V batteries but should only be connected in series when using 12V solar panels. A 300W (3x 100W) solar panel array typically needs a 30A charge

### **What's the difference between size\_t and int in C++?**

In several C++ examples I see a use of the type `size_t` where I would have used a simple `int`. What's the difference, and why `size_t` should be better?
